## DESCRIPTION

**Non-controllable retaining valve**, suitable for all types of systems (industrial, pneumatic, hydraulic and residential). It can be located in horizontal, vertical and oblique position.

The internal sealing device was designed so as to withstand circuit overpressure and to always guarantee greatest valve efficiency.

### PURPOSE

The **non-controllable retaining valve** can be considered as a safety means to be inserted inside a circuit.

It has the purpose of allowing the circulation of the fluid inside the circuit only in the direction imposed by the retaining valve and to pre-

vent the fluid from flowing in the opposite direction from the direction imposed by the valve.

### USE

The **non-controllable retaining valve** can be used in industrial and residential systems and can be mounted in horizontal, vertical and oblique position.

When mounting, **it is important to observe the direction shown by the arrow on the retaining valve body.**

In the case where overpressure is present in the circuit, the shutter of the sealing system is placed directly on the stop present in the body of the retaining valve and it guarantees perfect closure of the valve.

## CONSTRUCTION CHARACTERISTICS

Body	brass DIN 17660
Ring	brass DIN 17660
Spring	AISI 302
Gaskets	EPDM + PEROX
Threaded connections	FF UNI-EN-ISO 228 MM UNI-EN-ISO 228

## TECHNICAL CHARACTERISTICS

$P_{max}$ Maximum operating pressure	25/16/12 bar
$P_{min}$ Minimum opening pressure	0,04 bar (4 KPa)
$T_{max}$ Maximum operating temp.	0 °C ÷ 90 °C (water) -20 °C ÷ 110 °C (air)
Fluid used	water, air

## DIMENSIONAL CHARACTERISTICS

## FLUID-DYNAMIC CHARACTERISTICS

Analytical procedure for valve dimensioning valid for liquids with  $\rho \approx 1 \text{ kg/dm}^3$

$$Kvs = Q \cdot \left( \frac{10000}{\Delta P} \right)^{0.5}$$

suitable for water at temperatures from 0 to 30 °C

Analytical procedure for determining the pressure drop for liquids with  $\rho \approx 1 \text{ kg/dm}^3$

$$\Delta P = \left( \frac{Q}{Kvs} \right)^2 \times 10.000$$

suitable for water at temperatures from 0 to 30 °C

Correction of Kvs for fluids with  $\rho$  different from 1 kg/dm<sup>3</sup>

$$Kvs' = Kvs \cdot \sqrt{\rho'}$$

Correction of  $\Delta P$  for fluids with  $\rho$  different from 1 kg/dm<sup>3</sup>

$$\Delta P' = \Delta P \cdot \rho'$$

### KEY

$\Delta P$  pressure drop in daPa (1 daPa=10Pa)  
 $\Delta P'$  pressure drop corrected into daPa (1 daPa=10Pa).  
 $\Delta P_{\text{max}}$  recommended pressure difference for correct operation

Q flow rate in m<sup>3</sup>/h  
 Kvs hydraulic characteristic in m<sup>3</sup>/h (1m<sup>3</sup>/h=1.000 l/h)  
 $\rho'$  density of the liquid in kg/dm<sup>3</sup>
